

Pamphlets on Biology Volume 1796; Kofoed Collection

Filesize: 9.53 MB

Reviews

This sort of book is every little thing and got me to searching ahead and a lot more. This can be for all those who statte there was not a well worth reading through. I am just easily could possibly get a delight of reading through a published pdf.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1864 Excerpt: .of the mucous membrane, but especially the remains of the glands, are closely packed with bacilli negative to Gram, which are scattered diffusely throughout and also collected in large masses. Case VII.--J. M. The child was two years old and an imbecile. She was taken sick in the latter part of November with diarrhea. November 28th--No Shiga bacilli were found, but they were present on December 1st. She had diarrhea for one month and then recovered from this completely, but lost ground constantly and developed a very marked broncho-pneumonia, to which she succumbed on the 29th of January. For several weeks before her death her stools had been brown and normal, and examination failed to show the presence of any dysentery organisms. Autopsy.--There is a very marked broncho-pneumonia, with beginning abscess formation. The stomach and small and large intestines appear normal but for congestion. No hemorrhages, no ulceration, no follicular swelling, and the mucous membrane is smooth and glistening. Microscopical.--Ileum--Slight congestion. No ulceration, no necrosis, moderate infiltration of the interglandular stroma, with mononuclear cells, practically no polynuclear. This infiltration extends down to the submucosa, which is unaffected. Colon---The changes are the same as in the ileum. The cellular infiltration is a little more marked. Almost all the cells lining the crypts have been transformed into goblet cells. The solitary follicles are unaffected. Bacteria.--Very few of any kind are found, and those are superficial in the extreme. Case VIII.--G. F., one year old. Was admitted to the...
