AN INTRODUCTION TO CHEMICAL ANALYSIS; FOR STUDENTS OF MEDICINE, PHARMACY AND DENTISTRY

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 Excerpt: .which are not salts are blackened by the strong sulphuric acid and in some cases colorless gases are set free. If the preliminary test with sulphuric acid indicates the acid present, confirm it by the identification of its group, then by the reactions given under the acid. In case the preliminary test does not give definite results, dissolve the substance in water if possible, if not in a very small amount of nitric acid. Determine the class to which the acid belongs, using separate portions of the solution for each test. To identify the acid after this has been done compare its reactions with those of all the acids of the class. Although it is possible to group the acids in accordance with their similarities, the groups cannot be separated from each other and be afterward resolved into their components as easily as can the metals. Such an analysis is often accompanied with many difficulties. The following classification will aid in the identification of the acid radical of salts when only one is present or, if there are several, provided they are not of the same group. GROUP I. Precipitated by Ba in the presence of HNO_3 . The sulphate ion, SO_4 (sulphuric acid or sulphates). GROUP II. Carefully neutralize the solution with NH_4OH if it is acid. If the cation is precipitated filter it out¹ and test the filtrate for the anion with BaCl_2 .² The anions of this group give a white or colored precipitate, soluble...
