FUMIGATION INVESTIGATIONS IN CALIFORNIA VOLUME 75-79

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: .greatest with the smaller proportions of water. Fumigators are aware of this, and commonly increase the proportion of water when using large amounts of cyanid. Practice has demonstrated that with a greater proportion of water the injurious effect of the resulting gas on the leaves and fruit is materially lessened. The lessening of the injury has been attributed to the fact that the escaping gas was less heated when large proportions of water were used, in order to clear up this point an experiment was performed, the results of which are given in Table II. Table II.--Experiment to determine the effect of different proportions of water on the temperature of the resulting gas. In this experiment 5 ounces (avoirdupois) of cyanid and 5 ounces (fluid) of acid were used for each test. The proportions of water were varied, 5, 10, 15, 20, 25, 30, and 40 ounces, respectively, being used. As a result the proportion of water to 1 part of acid or 1 part of cyanid was 1, 2, 3, 4, 5, 6, and 8, respectively, for the different tests. These generations were made in a 1-gallon fumigating vessel in a room, The temperature of the escaping gas was taken at the mouth of the pot. The temperature of the acid-water mixture was taken one minute after pouring the two together. The cyanid was then added. The maximum temperature of the escaping gas is always realized within the first minute, usually thirty to forty seconds...
