

Fluid- and Gasdynamics

Filesize: 8.62 MB

Reviews

These types of book is the greatest ebook readily available. I was able to comprehend every little thing using this published e pdf. I realized this pdf from my dad and i encouraged this publication to discover.

(Dr. Porter Mitchell)

FLUID- AND GASDYNAMICS

To download **Fluid- and Gasdynamics** eBook, remember to follow the web link below and download the file or gain access to other information which are have conjunction with FLUID- AND GASDYNAMICS ebook.

Book Condition: New. Publisher/Verlag: Springer, Wien | Festschrift für Jürgen Zierp on The Ocasion on his 65th Birthday | This volume offers a wide range of theoretical, numerical and experimental research papers on fluid dynamics. The major fields of research - fundamentals of fluid mechanics as well as their applications - are treated:- stability phenomena: convective flow, thermal and hydrodynamic systems- transition, turbulence and separation: boundary-layer, turbulent combustion, rarefied gasdynamics, near wall and off wall flow fields, energy dissipation- transonic flow: homogeneous condensation, shock-waves, effects at Mach number unity- hypersonic flow: flow over spheres, aerothermodynamics, relaxation- fluid machinery: axial fans, compressor cascades, fluid couplings- computational fluid dynamics: passive shock control, zonal computation, cylinderflow, flow over wings- miscellaneous problems. | 1: Stability Phenomena.- Dynamics of flow instabilities in thermal and hydrodynamic systems.- Spoke pattern convection.- Digital particle image velocimetry applied to a natural convective flow.- 2: Transition, Turbulence and Separation.- On singular solutions of the incompressible boundary-layer equation including a point of vanishing skin friction.- Turbulence and rarefied gasdynamics.- Flow attachment at flow separation lines. On uniqueness problems between wall-flows and off-wall flow fields.- Near-wall phenomena in turbulent separated flows.- On the interaction of wave-like disturbances with shocks - two idealizations of the shock/turbulence interaction problem.- Some aspects of a model for coherent structures in turbulent boundary layers.- On the critical condition for wall turbulence generation.- Comparison of flamelet models for premixed turbulent combustion.- Correlations in homogeneous stratified shear turbulence.- Multiplicative models for turbulent energy dissipation.- 3: Transonic Flow.- Near critical transonic nozzle flows with homogeneous condensation.- Normal shock ?-foot topography at turbulent boundary layer.- On the stand-off distance of detached shock waves in internal transonic flows.- Internal flows with multiple sonic points.- The boundary value problem for low aspect ratio, pointed wings at sonic speed Recent developments in theory.- 4:...
