Not illustrated. 1899 Excerpt: .Their walls are very thin, except at the apical portions, where they are thickened and composed of dense fibrous tissue; these portions project into the ventricle; the openings are horizontal slits bounded by the thickened tissue which forms a pair of valves preventing the reflux of the blood into the auricles during the ventricular systole. On the floor of the pericardium, beneath the ventricle, are the openings of the reno-pericardial canals. On the anterior part of the floor are several openings which are the terminal portions of systems of tubules forming the paired pericardial glands. The tubules are lined with cells containing brownish-red concretions, and are distributed over a wedge-shaped area of the mantle extending, ventrally, from the most dorsal portion. The ventricle is prolonged backwards into a short narrow neck which still contains the rectum. A transverse membranous partition, beginning at the dorsal surface of...

Reviews

This publication may be really worth a go through, and a lot better than other. It really is written in simple terms and never difficult to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Natalie Abbott**

This book will not be simple to get going on reading but extremely exciting to read through. Yes, it can be playful, still an interesting and amazing literature. I am very easily could possibly get a delight of reading a written book.
