Problems in Analysis

By Gelbaum, B.

Book Condition: New. Publisher/Verlag: Springer, Berlin | These problems and solutions are offered to students of mathematics who have learned real analysis, measure theory, elementary topology and some theory of topological vector spaces. The current widely used texts in these subjects provide the background for the understanding of the problems and the finding of their solutions. In the bibliography the reader will find listed a number of books from which the necessary working vocabulary and techniques can be acquired. Thus it is assumed that terms such as topological space, u -ring, metric, measurable, homeomorphism, etc., and groups of symbols such as $A \cap B$, $x \in X$, $f: \mathbb{R}^3 \times \mathbb{R}^1 \rightarrow \mathbb{R}^2 - 1$, etc., are familiar to the reader. They are used without introductory definition or explanation. Nevertheless, the index provides definitions of some terms and symbols that might prove puzzling. Most terms and symbols peculiar to the book are explained in the various introductory paragraphs titled Conventions. Occasionally definitions and symbols are introduced and explained within statements of problems or solutions. Although some solutions are complete, others are designed to be sketchy and thereby to give their readers an opportunity to exercise their skill and imagination. Numbers written in boldface...
